

Sustainability in Projects

Integrating sustainability in projects – workshop

Workshop outline

- The workshops intends to offer the participants an insight into possible integration of sustainability tools and techniques into projects
- The aim of this workshop is to develop in a practical manner the basic tool box for sustainability in projects
- The content of the workshop corresponds with and draws from the established project management methods and frameworks
- The workshop will be based upon a real or simulated project selected by the participants, which will allow us to put into practice the essential tools of sustainable project management
- The workshop is a good starting point for further implementation of sustainable project management, supported by dedicated project consultancy and assessment
- The workshop is rooted in the approach of the PRISM method and the P5 standard, developed by Green Project Management Global

Target group

- Project Managers
- Project Management Officers
- Project Planners
- Project Executives and Sponsors

Benefits

- A grasp of the sustainability perspective in project processes
- Development of sustainability tools and techniques
